T-fal GC722D53 OptiGrill XL Large Stainless Steel Indoor Electric Grill - Use Manual - Use Guide PDF. Documents: Go to download! Owner's manual - (English) Instructions use Grill for T-fal GC722D53ContentsIMPORTANT SAFEGUARDSSafety instructionsShort Cord instructionsDescriptionGuide of LED colorsGuide of automatic cooking programsSettingPre-heatingCookingCommentsCleaning and maintenanceCleaningTroubleshooting guideCooking GuideMANUFACTURER'S WARRANTYCleaning and maintenancePress the on/off button to turn off the appliance. Unplug grill from wall outlet. Allow to cool for at least 2 hours. To avoid accidental burns, allow grill to cool thoroughly before cleaning.CleaningBefore cleaning, unlock and remove the plates to avoid damaging the cooking surface. The drip tray and the cooking plates are dishwasher safe.The appliance and its cord cannot be placed in the dishwasher. The heating elements, visible and accessible parts, should not be cleaned after removing the plates. If they are very dirty, wait until the appliance has completely cooled down and clean them with a dry cloth. If you do not want to clean them in a dishwasher, you can use warm water and a little dishwashing liquid to clean the cooking plates, then rinse thoroughly to remove any residue. Dry thoroughly using a paper towel.Do not use metallic scouring pads, steel wool or any abrasive cleaners to clean any part of your grill, only use nylon or non-metallic cleaning pads. Empty the drip tray and wash in warm water and a little dishwashing liquid, dry thoroughly using a paper towel.To clean the grill cover, wipe with a warm, wet sponge and dry with a soft, dry cloth.Do not immerse the body of grill in water or any other liquid.Always make sure grill is clean and dry before storing.Any other servicing should be performed by an authorized service representative.How to cook another batch of food:After finishing your first batch of food:Make sure the appliance is closed with no food inside.Select the appropriate cooking mode/program (this step is necessary even if you decide to pick the same cooking mode than for the previous batch of food).Press the "OK" button: the appliance starts pre-heating. The pre-heating is symbolized by the cooking level indicator that flashes purple.The pre-heating is complete when an audible beep is heard and the cooking level indicator stops flashing purple. After the pre-heating, the appliance is ready for use. Open the grill and place the food inside the appliance.Important: - Please note that any new batch of food, the pre-heating phase is mandatory.Newest Added: OPTIGRILL T-FAL FV4017 T-FAL T-FALTags: T-fal Grills User Manuals, T-fal Ultraglide Iron Manual, T-fal Grills Use Manual, T-fal Ultraglide Steam Iron No. Once the first batch has finished open the grill fully and remove the food. Close the grill and press OK. You do not have to switch off the grill first. When the lights flash again, choose the mode that you want. The preheating phase should be a lot quicker than the first time as the plates will already be hot. When the Optigrill beeps to say it is ready, open the grill again and put the second batch of food on to the plates and continue as normal. What is the cooking temperature of the grill plate in manual mode? There are 4 temperature levels, as shown by the colour indicator:Green: 110°C (230°F to 257°F)Yellow: 190°C (356°F to 383°F)Orange: 225°C (428°F to 455°F)Red: 270°C (518°F to 545°F) Can I use the frozen food setting when cooking in the manual mode? No as the cooking sensors are not active in manual mode. Maintenance and cleaning How do I clean my grill? Before cleaning your grill, wait around 45 minutes while the device cools. To remove heavy food residue on the grill plates or on the side, we recommend you use a wooden or plastic spatula. To clean the grill and grill components, use a cloth soaked in hot water. Do not immerse the grill in water. Do not use abrasive cleaning products or products containing alcohol or fuel since these may damage the device. Technical support The purple indicator light remains on when the food has been placed on the grill plates and the grill closed - why? The appliance has not been fully opened when placing the food on the grill plates before cooking.Solutions: To allow the appliance to detect the start of the cooking cycle, the appliance must be completely opened before each cooking cycle. If not, the cooking cycle will not start. Completely open the grill then close it and press OK. What should I do if my appliance is not working? After following the instructions in the user manual for starting the appliance, make sure that your electrical socket is working by plugging another appliance. If it still does not work, do not try to dismantle or repair the appliance yourself, instead, take it to an approved repair centre What should I do if the power cord of my appliance is damaged? Do not use your appliance. To avoid any danger: have it replaced by an approved repair centre. The colour indicator flashes white - what does this mean? The appliance has detected an issue and may need to be repaired. The cooking cycle has stopped whilst cooking - why? If you leave the appliance open between 2 cooking cycles it will turn to safety mode and will have to be reset.To ensure the best cooking results, you should not open the appliance for more than 1 minute during cooking cycles. RESET by unplugging it for 2-3 minutes and restart full cooking cycle. Why does my appliance no longer beep? The appliance needs to be repaired. The OK indicator is still flashing even though I have put food on the plates and closed the grill - why? If your food is under 4 mm thick, it is too thin (like bacon slices), it may not be detected.This is not a problem simply press the OK key for confirmation for cooking to start. The appliance began cooking in manual mode (red indicator) without this mode being selected. Why? You started cooking before preheating had finished.To rectify this: turn off the appliance, remove the food, restart the appliance and then return to the programme selection and wait until preheating has finished before cooking the food.If the problem persists despite adhering to the advice above: the appliance may need to be repaired. The appliance switches automatically to manual mode (green indicator) after start-up. Why? • The grill plates have not been properly placed on the plate hooks and therefore, the sensors cannot correctly detect the food.To rectify this problem, turn off the appliance and allow it to cool down. Then install the cooking plate correctly. • You started cooking food between the plates without preheating.To rectify this: turn off the appliance, remove the food, close the appliance. Turn the appliance back on, select and confirm a programme and wait until preheating has finished. • If the problem persists despite adhering to the advice above: the appliance may need to be repaired. My grill emits smoke during the preheating phase. This may be due to improper cleaning of the cooking plates.We recommend that you pre-wash your cooking plates in the following manner before putting them in the dishwasher to remove any food residue:- Soak the plates in hot water and degreasing dish soap for about 30 minutes. - Scrub both sides of the plate with a sponge or a dish brush, hot water and degreasing dish soap. - Rinse. - Put in the dishwasher. Various topics Where can I dispose of my appliance at the end of its life span? Your appliance contains valuable materials which can be recovered or recycled. Leave it at a local civic waste collection point. Where can I buy accessories, consumables or spare parts for my appliance? Please go to the "Accessories" section of the website to easily find whatever you need for your product. What are the guarantee conditions of my appliance? Find more detailed information in the Guarantee section of this website. The dual-chip, single card war rages on between AMD and Nvidia – both the HD 6990 and GTX 590 are ridiculously expensive and powerful, so which do you choose?There's so little difference in performance terms it's nigh-on impossible to call a winner by simply analysing benchmarks. But with the arrival of the Define XL from Ginger6, we've now seen gaming PCs built around both cards.Perhaps it's here, in the real world, that we can establish the better of the two cards? Well, perhaps if Ginger 6 had paired the HD 6990 with Intel's all-conquering i7 2600K CPU we'd have a straight fight.Last issue, Dino PC went and clocked the 2600K up to 5GHz for its Evolution 2600K rig, and working with the GTX 590 the resultant benchmark results were frankly bonkers. Ginger6's rig comes in at exactly the same price point, but instead it's the cheaper, less powerful Core i5 2500K inside the Define XL.Don't get us wrong, the 2500K is a great chip. It offers great value for money for those fiscally disinclined to plump for the i7. The thing is, using a phrase like 'value for money' about a component in the same PC as a £540 graphics card seems a bit silly. The HD 6990 isn't about value; it's about extreme performance.The i5 2500K's presence means two things. Firstly, you won't be making the most of that ridiculous graphics card. Try as it might, the HD 6990 won't render as many frames with a 2500K as it would with the 2600K. In all fairness, Ginger6 have overclocked this i5 up to an impressive 4.8GHz, but it's a four-core, four-thread CPU. Compared to the eight threads of the 2600K (which smart applications can dedicate individually to CPU rendering tasks), it's a far from ideal pairing with the HD 6990.Secondly – and rather damningly – it means that the Define XL has less performance to offer for more money than the Evolution 2600K. Not only is the GTX 590 a pricier card, but the i7 2600K CPU has been squeezed in to that £1,799 price tag. In short, it's impossible to recommend; there's absolutely no reason not to buy the Dino PC instead, even with the option to have this Ginger6 machine with a GTX 590 in as well. BenchmarksCPU performanceCinebench index: Higher is betterDefine XL - 7.50Evolution 2600K - 8.97Phoenix Hydro X - 7.84DirectX 11 tessellation performanceHeaven 2.0 Frames per second: Higher is betterDefine XL - 38.3Evolution 2600K - 32.4Phoenix Hydro X - 38.4DirectX 11 gaming performanceDirt 2 Frames per second: Higher is betterDefine XL - 94.6Evolution 2600K - 178Phoenix Hydro X - 90Read the full Dino PC Evolution 2600K OC reviewRead the full Palcomp Phoenix Hydro-X OC reviewGood pointsAw, now we've told the Define XL off and its monolithic face is looking all sad. Let's mention the good aspects of this build, redundant though these have been made by the CPU debacle.The Fractal Design XL case is amazing. Long after all the components are rendered obsolete by Moore's Law and the deafening stampede of technological advancement, you'll still use this case. It's huge, quiet, solid, and packed with drive bays.Actually, storage has been bizarrely overdone – 120GB of SSD and 2TB of HDD space enough for you? It's all very well and good, but we'll bet any gamer would rather the money was spent on a better CPU.It's a swing and a miss from Ginger6 then, and a missed opportunity to settle the AMD vs Nvidia flagship card wars.Follow TechRadar Reviews on Twitter:
